Dear Hiring Manager,

I am applying for the Graduate Engineer Program at Industrus Engineering. The opportunity to rotate across projects—ranging from renewable energy storage to disaster recovery and digital design—aligns strongly with my passion for building sustainable, innovative engineering solutions. As a Software Engineering (Honours) student at UTS with hands-on experience in software test infrastructure, automation, and cross-team collaboration, I am excited to contribute to Industrus's mission of re-imagining engineering.

At **Employrite**, I upheld the highest standards of **ethical conduct and accountability (3.1)** by processing sensitive background screening applications with <1% error rates. This attention to detail reinforced trust with clients and stakeholders.

At **Advanced Navigation**, I demonstrated **communication and performance management (3.2, 3.5)** by coordinating the company's transition from MATLAB to Python. Through documentation, walkthroughs, and feedback sessions, I improved tooling maintainability and achieved a 20× increase in CI/CD throughput, showing both technical impact and self-direction.

I thrive in **creative and innovative environments (3.3)**. During **AuslanLive**, I co-developed a neural network to translate Australian Sign Language into text, contributing to a second-place award in the community choice category. Similarly, at **Veremark**, I built a Pytest-based testing framework with YAML configuration and PDF reporting, making results accessible to non-technical users and improving **information management (3.4)** across teams.

Finally, I have demonstrated **teamwork and leadership (3.6)** in the Psithurism iOS Industry Studio, where I led a group of three to deliver Apple Vision Pro and Apple Watch applications on time and to a high standard.

I would welcome the opportunity to discuss how my skills and experience can support Industrus Engineering's diverse and innovative projects. Thank you for considering my application.

Sincerely,

Daniel Braithwaite

Bachelor of Software Engineering (Hons)
University of Technology Sydney
